

**KUSINI**

PURPOSE IN EVERY DROP

**Dear Friends**

*Thank you for making 2019 such an impactful and memorable year for Kusini water, we want to thank you for your loyalty and for your giving.*

*Happy summer, stay hydrated  
and keep giving.*

*From Murendi and the whole Kusini Team*

## 2019 HIGHLIGHTS

This year we managed to hit the **1,000,000** liters per month mark. Through your purchases the month of August saw us give 1 million liters to the communities of Hammanskraal, Balfour, Joe Slovo and we have managed to build an online monitoring platform that lets you see how much water is flowing in each community at any given time; this platform allows you to see exactly where each of your purchase goes.

4 NEW SITES WITH  
ACCESS TO SAFE  
DRINKING WATER

1 MILLION LITERS  
OF WATER  
PURIFIED DAILY

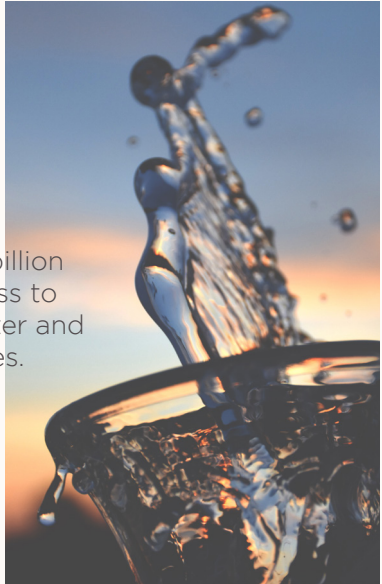

10,000 PEOPLE  
IMPACTED

## THE PROBLEM

Globally Over a billion people lack access to safe drinking water and sanitation services.

### *Our Mission*

Kusini Water uses locally sourced material such as macadamia nut shells and renewable energy to bring water in areas affected by lack of access to safe drinking water

## OUR MODEL

### **1 FOR 20:**

As you know our business model relies on purchases. For every 1 liter purchased we give 20 liters to one of our beneficiary communities.

2020

Our mission to reach 5 million people in 5 years starts in 2020; In 2020 we will fund more than 100 projects throughout South Africa and this is how we'll do it

**GOING SUPER LOCAL**

When we fund a water project, we find, train and empower local youth and water experts. These partners give us great local presence, local ownership and through our training will gain deep understanding of how to implement effective, sustainable water projects in their area. Our organization will partner with local NGOs and training institute to do this.

**MORE  
THAN**

**2020**

2025

**100  
PROJECTS**

### **SUPER FOCUSED**

We will continue to serve free water through schools, clinics and local community halls in rural and low income communities within the African continent. We know that being super focused in the communities we serve we can reach more people with greater efficiency. And when we know an area well, we make better long-term investments, promote greater coverage, and provide more value to the community as a whole.

## PROJECT HIGHLIGHT

### *Tikello Primary School*

Tikello primary school is a farm school based half an hour from Heidelberg, the school is in a remote area with no piped network and relies on groundwater as a source for drinking water.

By working with The Gauteng Department of Infrastructure we have managed to give this school a fully solar-powered water treatment and distribution system. This project has shown that through our partnership, we're able to work more efficiently and multiply our impact.
